2020 SPRING/SUMMER YARN COLLECTION

Borgo de' Pazzi®

F I R E N Z E

www.borgodepazzi.com

2020 SPRING - SUMMER YARN COLLECTION

Borgo de' Pazzi "Summer 2020" collection focuses on the following main concepts:

- Exclusive, new Yarns and fibers with special compositions
- Hand-dyed yarns
- Eco-friendly, recycled yarns in a wider range of thicknesses
- Large offer of finest quality warm cotton yarns, in a wide range of colours

Bamboo, silk, premium cottons, fine linen, ecological rayon: spun singly, concentrating on the specific characteristics of each fiber or knowingly blended to create one-of-a-kind yarns.

Each yarn in this collection has been created to be unique and special, with an emphasis on premium quality and a broad palette of colors.

This season's new entries are **Amore Cotton 170** and **Amore Cotton Macramé**, both from recycled fibers, produced with regenerated cotton from old fabrics and production scraps.

Not only is it beautiful and ecological, it also has an excellent quality/price ratio. The use of recycled fibers strongly reduces environmental impact, decreasing the use of pesticides necessary for the production of plant fibers. The synthetic component is also derived from recycled materials, which means less material destined to landfills.

The yarns are not dyed; the colors are obtained by the selection by color of the materials to be regenerated.

The use of these yarns fits perfectly in tune with a circular economy which encourages recycling instead of onerous disposal in landfills of incinerators.

Sira (silk/bamboo) makes it possible to create beautiful garments that improve as they are worn and washed. Initially the fiber may not seem elastic, but it softens to the touch with use.

Raw Linen and **Lino Mélange** in 100% linen, already a successful part of our last collection, are back in a palette of beautiful, new colors.

Ecological Products

Our most ecological fibers (as well as the softest) include **Dalia** and **Hannah**, in LYOCCELL derived from eucalyptus cellulose, produced using non-toxic, 100% recyclable solvents.

The Quality of Borgo de' Pazzi yarns is essentially the result of choosing the right raw materials:

Flambé and **Flambé 3**, in ultra soft American slubbed cotton is perfect for sweaters and accessories. The uneven texture of slubbed cotton makes your projects truly one-of-a-kind.

Fresco, now in its fourth year as part of our collection, is proposed in a rich linen and rayon blend for softness and a "rustic" appeal.

Perfect for shawls, tank tops or sweaters with a sophisticated look.

Giza and **Giza Più** are available in a wide renewed range of colors. Produced in 100% Egyptian Giza cotton, it is soft with a uniform texture.

All of the yarns in the 2020 collection, as well as those from previous collections, are available in a variety of new colors: **Flambé** and **Hannah** are also available in the multicolor palette.

Giza, **Giza Più**, and the other yarns in Pima cotton are produced with "warm" cotton: the fiber has not been processed with chemicals to create a "cold", glossy finish.

These yarns reflect the natural

characteristics of cotton and are also suitable for colder weather and for those people whose skin may be sensitive to wool.

Hand-dyed Yarns

This year we have further increased our range of hand-dyed yarns so the garments made with them will truly be unique.

Lebes is a plied yarn with one ply in slubbed cotton, another in metallic thread with silver colored nubs and a third gold thread, in a "random" all-over pattern.

Mila is a luxurious blend of cotton and silk.

Pelagia, also present in the previous years' collections, is available in 50 gram hanks; it is a blend of 70% cotton and 30% linen.

Pima, our warhorse, is a warm, soft Peruvian hand-dyed cotton.

Pima Silk, presented in 2019, is a luxurious blend of Pima cotton and silk.

Borgo de' Pazzi "Zomer 2020" richt zich hoofdzakelijk op de volgende concepten:

- Exclusieve nieuwe garens en vezels met speciale composities
- Hand-geverfde garens
- Milieu-vriendelijke, gerecyclede garens in een nog breder scala aan diktes
- Groot aanbod van de beste kwaliteit onbehandelde katoenen garens in een breed kleurenpalet

Bamboe, zijde, premium katoen, fijn linnen en lyocell: afzonderlijk gesponnen, met oog voor de specifieke kenmerken van elke vezel of bewust gemengd om unieke garens te creëren.

Elk garens in deze collectie is speciaal ontworpen om een uniek product af te leveren, met de nadruk op hoge kwaliteit en een breed aanbod van kleuren.

De nieuwe producten van dit seizoen zijn de **Amore Cotton 170** en **Amore Cotton Macramé**, beide gemaakt van gerecyclede vezels, verwerkt met geregenereerd katoen van productieafval en oude stoffen.

Deze mooi garens zijn daarom erg milieu-vriendelijke en hebben bovendien een uitstekende prijs/kwaliteitsverhouding.

Het gebruik van gerecyclede garens vermindert de belasting op het milieu aanzienlijk, doordat er geen pesticiden nodig zijn voor het produceren van de plantenvezels. Het synthetische component is ook verkregen van gerecycleerd materiaal, dat hierdoor niet op de stortplaats belandt.

De garens zijn niet geverfd; de kleuren worden verkregen doordat de materialen op voorhand worden geselecteerd op kleur.

Het gebruik van deze garens past perfect in een circulaire economie waarin recycling wordt aangemoedigd, in plaats van kostbare vernietiging op stortplaatsen of in verbrandingsovens.

Sira (zijde/bamboe) maakt het mogelijk om prachtige kledingstukken te maken die zelfs verbeteren naarmate ze meer gedragen en gewassen worden. Aanvankelijk lijkt de vezel misschien niet elastisch, maar bij gebruik wordt deze steeds zachter.

Raw Linen en **Lino Mélange** (100% linnen) waren al eerder een succesvol onderdeel van de collectie en zijn nu terug in een pallet van prachtige nieuwe kleuren.

Ecologische producten

Onze meest ecologische vezels (en bovendien de zachtste) zijn **Dalia** en **Hannah** in LYOCCELL, verkregen van eucalyptus cellulose, geproduceerd met niet-giftige, 100% recyclebare oplossingen.

De kwaliteit van Borgo de' Pazzi garens is in wezen het resultaat van het kiezen voor de juiste grondstoffen.

Flambé en **Flambé 3**, in ultra-zachte Amerikaanse "slubbed" katoen, dat zich perfect leent voor het maken van truien en accessoires. De oneven textuur van dit type katoen maakt je project werkelijk uniek.

Alle garens in de 2020 collectie, evenals onze eerdere collecties, zijn verkrijgbaar in verschillende nieuwe kleuren: **Flambé** en **Hannah** zijn ook verkrijgbaar in een multi-color palet.

Fresco, nu al het vierde jaar deel van onze collectie, een rijke mix van linnen en lyocell voor zachtheid en een rustieke uitstraling. Perfect voor sjaals, tops of truien met een verfijnde look.

Giza en **Giza Più** zijn verkrijgbaar in een breed en vernieuwd scala aan kleuren.

Geproduceerd met 100% Egyptische Giza katoen, zacht en met een unieke textuur.

Giza, **Giza Più**, en de andere garens met Pima katoen zijn geproduceerd met "warme"

katoen: de vezels zijn niet bewerkt met chemicaliën om een koude glanzende afwerking te creëren. Hiermee behouden ze hun natuurlijke uitstraling en zijn ze ook zeer geschikt voor kouder weer en voor mensen met een wol-allergie.

Hand-geverfde garens

Dit jaar hebben we ons assortiment hand-geverfde garens verder uitgebreid om nog meer unieke werkstukken te kunnen creëren.

Lebes is een getwijnde draad van "slubbed" katoen, een metallic zilveren draad met gekleurde nopjes en een derde gouden draad in een willekeurig patroon.

Mila is een luxueuze mix van katoen met zijde.

Pelagia, ook verkrijgbaar in eerdere collecties, is een mix van 70% katoen en 30% linnen, verkrijgbaar op strengen van 50 gram.

Pima, ons paradepaardje, is een warme, zachte en hand-geverfde Peruaanse katoen.

Pima Silk, gepresenteerd in 2019, is een luxe mix van Pima katoen met zijde.

**We provide the stores that sell our yarns with "web" format photos of all the yarns we produce in all available colors.*

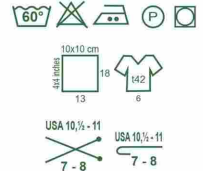

If you have a yarn store and are interested in our new yarns, please contact us for our wholesale prices.
